

Multi-Fuel Boiler Update

(May 5, 2018)

Alternate Heating Systems has made several developments in all series of the Multi-Fuel line. These important changes ensure that we are providing you the highest quality, most innovative, and greatest efficiency products on the market. See the table below.

Better Design	=	Better Combustion
<p>New Grates AHS has implemented our proven Legacy grate system, replacing the older Rolla-Grate system.</p>		<p>Perforated grates provides more airflow into the combustion chamber.</p>
<p>New Ashpan Boilers will now have a top handle and ash pan that is 3x larger than before.</p>		<p>A top handle allows for easier cleaning and increases time in between emptying of the ashpan.</p>
<p>New Door The new door design is larger and will include a gasket and draft control.</p>		<p>A gasketed door allows less heat override, and makes a more controllable combustion.</p>

Larger Ashpan

The new ash pan style (shown on the right in both pictures) is 3x larger than the old style (left) and also includes a top handle for easy cleaning.

New Door

The new door (right) is larger and has a gasket and draft control, unlike the old design (left).

New Base Design

New base design (left) and previous base design (right)

New Grate System

Old Rolla-Grate system (left) and new Legacy grate design* (right).
*Picture used is from 40 and 55 series, number of grates may differ from 40 or 55 series'
